VX-3K-SW

Audio Management Software

The new audio management software for the VX-3000 voice alarm system brings a graphic user interface and many new software solutions for the VX-3000 voice alarm system. With this new software, you have more possibilities to control the source and volume for each zone or selection of zones. You now get a simplified control over the background music of the VX-3000 voice alarm system. The graphic remote control software enables easy handling for the user. It can also be integrated with already existing systems (cash registers). The Software VX-3k-SW is especially interesting for locations with highest flexibility aspects, i.e. supermarkets, retail stores, shopping malls, museums etc. and locations with changing requirements on music, internal paging, scheduled messages and playlists and changing staff.

FEATURES

Timer

- 10 daily programs of up to 50 events, assign to
- Weekly program, each day (7), or to
- 50 Holiday programs (start to end date)
